Programme of the European Union

# ZERO BRINE

## Work Package 3

<Task 3.2. Demonstration in textile industry, ZORLU Textile>

H2020 project, June 20-21, 2018

# Objective

- a) Utilization of the recovered concentrated salt solution for the dyeing process baths, alternatively,
- (b) Application of evaporation/crystallization processes to obtain recoverable salt for other sectors such as leather salting etc.

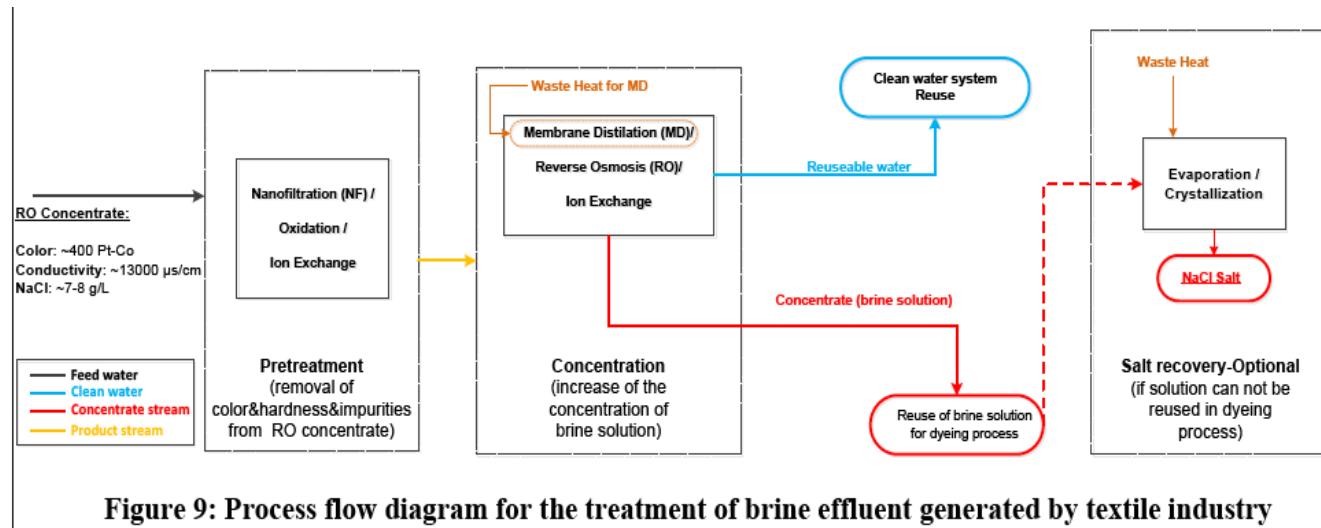

Figure 9: Process flow diagram for the treatment of brine effluent generated by textile industry

# Tasks

- **Task 3.2.** Demonstration in textile industry, ZORLU Textile
- Utilization of the recovered concentrated salt solution for the dyeing process baths (M1-M36)
- **Subtask 3.2.1:** Development of the innovative brine treatment system for textile industry. Characterization and bench scale studies (M1-M30).
- **Subtask 3.2.2:** Construction, operation and optimization

# Tasks

- **Pre-treatment:** removal of impurities color and hardness from the salt stream (NF, oxidation, ion exchange)
- **Concentration:** MD membrane distillation (waste heat for MD), RO, ion exchange...
- Tests on the fabric to check suitability.
- Treated water for reuse...
- **Alternative** technology option for the valorization for leather or other sectors, processes evaporation and crystallization.
- Pilot scale system, with a capacity of 2-4 m<sup>3</sup>/day, will be designed in accordance with the results of the lab-scale experiments. Furthermore, procurement, installation and testing period will be commenced.
- **Subtask 3.2.2:** Construction, operation and optimization
- This task involves detailed engineering design of the proposed system approach which is decided upon within the activities of Task 3.2.1. (M30-M42)

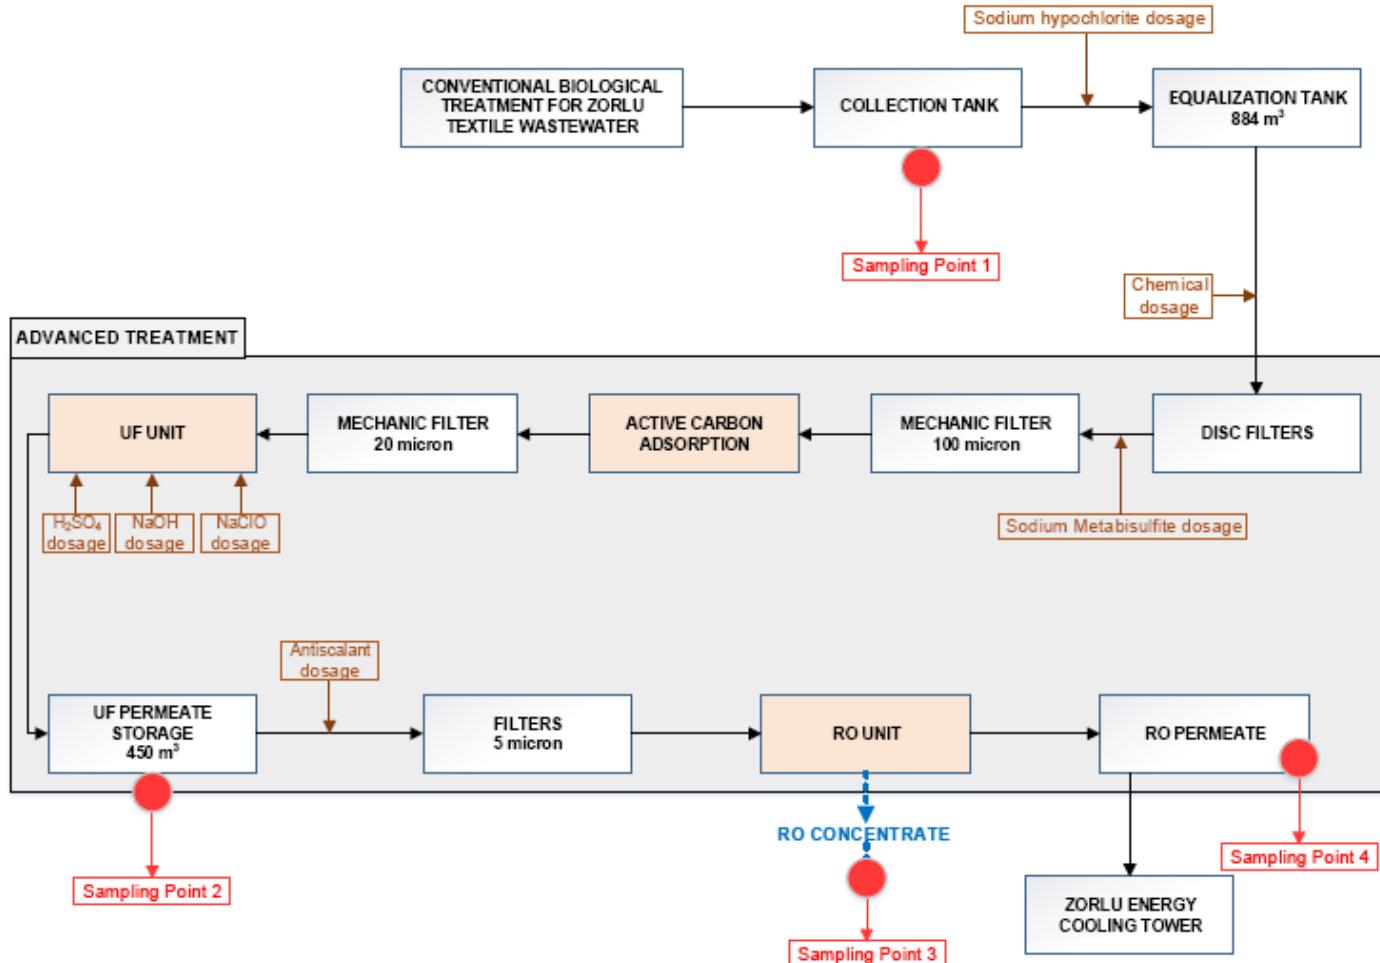

# Gantt Chart of WP 3.2

Work Package (WP) / Task (T) / Deliverable (D)	Year 1												Year 2												Year 3

seplite SC130  
cationic resin

## Next steps

- Ozone oxidation for colour removal,
- Test amberlite anionic resin for chloride removal,
- Electro-coagulation

## Concentration step

- MD
- RO
- ion exchange
